By clicking in create instance,

It will create an instance and by copying the IPV4 address of the instance and pasting it in newtab

We will get the wp-admin interface, where we should login to that.

Then we will get an wordpress dashboard where we can edit our website and host it.

This is an other method to do web-hosting.

And also an easy method where we can host it in 5min.

So, this is an other thing which we explored in aws.
